

STUDENT RATINGS: CLASSROOM QUALITY

2013-2016

This graph shows a comparative ranking of the room quality score compiled by LEE for all the rooms studied over 3 years. This score is a compound of the physical aspects (e.g., lighting, furniture, overall physical comfort) rated by students in the LEE student survey. It has been standardized to be expressed out of 100%. Scores have been ranked from lowest to highest for display purposes.

Please note that while the AH177 survey has slightly different items, only equivalent questions for both surveys were used. The following survey items were removed from the quality score: "Facilitates Different Learning Activities" and "Lighting at the Front of the Room."
