

Adjusting the temperature in your apartment (Mt Blakiston House)

We do not have climate control in the apartments in Mount Blakiston House.

The heating system in the building only turns on when an outdoor sensor picks up a temperature below a set level (currently 14degC). There is NO heat sent to the rooms until this happens.

Each heating unit is controlled by a dial that looks like this

Each dial will ONLY control the unit it is attached to **and will only work when the building heating system is activated.** To get more or less heat in a room you may need to adjust more than one dial if there is more than one radiant panel.

To get more heat simply turn the dial to the left. Turn the dial left till it stops to get maximum heat.

MORE HEAT

Turn the dial to the left as far as it goes to turn off the heat.

LESS HEAT

If you are having issues with the room being way too hot or too cold, please submit a work order to Housing Services through StarRes.
