Economics

Economics is a behavioural science that studies the conditions under which individuals provide the best possible satisfaction of their needs. It is not specifically about money, things or material objects — it's about the consequences of individual decisions made under conditions of scarcity. As an economics student, you will gain a deep understanding of the decision making process at the individual, firm or government level. You will learn how unhampered market processes lead to efficient production of goods and services, and the effects of interfering with these processes.
